Paper
(JP)
  Treatment: Practical (P)

  Abstract: In a programming languages course, a student must struggle
with
numerous parameter passing techniques and also with different
means of
resolving the scope of variables that are not local to a
procedure.
Parameter passing methods typically studied include value,
reference,
copy-restore (value-result), and **macro** (pass-by-name). Scope
resolution
techniques include **dynamic** and static scoping, with static
scoping
implemented either by static chains or displays. Coping with all of
these
issues requires that the student have a solid understanding of the
stack of
activation records that is maintained by an executing program. We
have
developed a miniature Pascal-like language and accompanying
user
environment (called PSVE) expressly designed to allow
exploration of
parameter passing and scoping questions. By providing links to the
GAIGS
algorithm visualization system, the PSVE system allows a student to
view a
graphical rendering of the stack of activation **records** at user-
selected

key points of program execution. (7 Refs)
